OPEN PAWS

SETUP GUIDE

Open Paws Tools in Claude

Open Paws builds AI research tools for animal advocates. This guide connects them to Claude, so you can ask for them in ordinary language. It takes about five minutes and needs no technical knowledge.

What you get

Three tools, used from any Claude conversation.

Deep Research

An in-depth report with sources on an animal-related question — farmed animal welfare, wildlife, animal law and policy, or a company's commitments.

Takes 6–20 minutes

Research Companies

A profile of one company built from public information: its key people, supply chain and recent news.

Takes 5–20 minutes

The knowledge base

Answers drawn from animal advocacy sources, and it keeps the thread so you can ask follow-up questions.

Usually under a minute

Before you start: get your access token
You need an Open Paws access token. It begins with **opk_** — ask Open Paws for one. Treat it like a password: it is tied to you, so don't share it, email it on, or paste it anywhere public.

Which Claude is this for?
The steps on the next page cover **claude.ai** in a browser, the **Claude desktop app**, **Claude on mobile** and **Cowork**. You do this once; it then works everywhere you sign in to Claude. If you use **Claude Code** instead, there is a short note at the end.

What happens next

1. **Add the connector**
2. **Sign in with your token**
3. **Add the skills (optional)**

Each step is spelled out on the next page.

Set it up

Three steps. The third one is optional but worth doing.

1 Add the connector

In Claude, open **Customize** › **Connectors** › **Add custom connector**.

Give it a name you'll recognize, such as **Open Paws Tools**, and paste this address:

```
https://tools-api-production-71f4.up.railway.app/mcp
```

If Claude asks how it should identify itself, choose **Register automatically**. Then save.

2 Sign in with your token

Claude opens the Open Paws sign-in page. Paste your **opk_** token there once, and you're connected.

Claude never sees the token itself. It gets its own key for that one connection, renews that key on its own, and the key stops working the moment your token is revoked.

3 Add the skills (optional)

The skills teach Claude when and how to use each tool, so you get better results without having to explain yourself.

Open **Customize** › **Plugins** › **Add** › **Add marketplace**, enter:

```
https://github.com/Open-Paws/claude-plugins
```

then install **Open Paws Tools**.

> **On a Team or Enterprise plan**
> An Owner adds the connector once, under **Organization settings** › **Connectors**. Everyone else then connects with their own token — usage and history stay separate per person.

Try it

Ask in plain language — Claude picks the right tool. For example:

- "Research cage-free egg commitments by UK supermarkets since 2020."
- "Build me a profile of this company: who runs it, its supply chain, and anything in the news recently."
- "What do advocacy sources say about ag-gag laws in the US?"

If you added the skills, you can also start one directly by typing **/open-paws-tools:deep-research**, **/open-paws-tools:company-research** or **/open-paws-tools:knowledge-base**.

What to expect

- **Claude asks first.** It checks with you before it starts a research run or sends a message to the knowledge base.
- **Research takes a while.** A report takes 6–20 minutes. You can leave the conversation and come back — ask Claude for the result later.
- **Knowledge base answers are quick**, usually under a minute, and Claude remembers the thread for follow-up questions.

Where your questions go

Your questions, the companies you research and any organization details you add go to the Open Paws Tools API, which runs them through Open Paws' research workflows. Those workflows search the web and use AI models. Open Paws keeps your runs and conversations, linked to your token, until you ask for them to be deleted.

If something doesn't work

- Check the token was pasted whole and starts with **opk_**.
- Check the connector shows as connected under **Customize** › **Connectors**.
- Still stuck, or need a token? Get in touch with Open Paws.

> **If you use Claude Code**
> Run these two commands in a Claude Code session, and enter your token when asked — it is kept in your system keychain. Needs Claude Code 2.1.269 or later. To change the token later: **/plugin configure open-paws-tools@open-paws**. For updates: **/plugin marketplace update open-paws**. If you set up the connector as well, Claude Code gets a synced copy of the plugin — keep one copy switched on and turn the other off, so the tools don't appear twice.

```
/plugin marketplace add Open-Paws/claude-plugins
/plugin install open-paws-tools@open-paws
```
